STANDARD INDUSTRIAL CLASSIFICATION

Alphabetical Index of Industries

This index is to be used in conjunction with the "Standard Industrial Classification." The number following the name of each industry or activity given in the index shows the Minimum List Heading and sub-division (if any) under which the industry should be classified, while the letters refer to the corresponding code used by the Ministry of Labour and National Service.

If an industry cannot be found in the index under the first word of its title, search should be made under each successive word, or under any likely variation of the title.

The abbreviation "manuf." includes "making" and other synonyms for manufacture and also "repairing" except in cases where a separate classification is provided for repair work.

The word "dealer" also includes synonymous terms such as "shopkeeper," "merchant," "agent," "broker," and "factor."
